New ThermoBall Hooded Jackets

The North Face offers a new synthetic alternative to down. ThermoBall™ is a revolution in insulation technology. Unlike traditional, continuous-filament synthetic insulations, the small round synthetic fiber clusters closely mimic down clusters; trapping heat within small air pockets to retain warmth. Independent testing has shown that ThermoBall™ technology can offer the low weight, loft, warmth and compressibility of down with the wet-weather insulating performance of synthetics with the warmth equivalent of 600 fill down.

DRYVENT™

DryVent™ styles are engineered to be fully waterproof, windproof and breathable. The outer face is treated with a durable water-repellent finish that helps form droplets and repels water from the surface. Each multi-layered style is engineered to allow water vapor to pass through from the inside to the outside.

DryVent™ fabrics are engineered in a variety of weights, textures and performance characteristics to allow for your maximum protection, performance and comfort.

All DryVent™ clothing is fully seam-sealed and designed with specific features that are relevant to your specific activity needs and conditions.
